

Tensorcom the Pioneer in WiGig/60GHz Wireless Communications

About Tensorcom

Tensorcom, a member of the NantWorks™ family of companies, is a privately-held fabless semiconductor company headquartered in Carlsbad, California. The company continues to be a pioneer in developing cutting edge technology for high-speed millimeter wave wireless communication and offers ultra-low power consuming products supporting the 802.11ad WiGig standard.

WIGIG/60GHZ SOLUTIONS
TODAY

Our Technology

Tensorcom's ultra-low power consuming, small form factor, high performance System-on-Chip (SoC) technology operating in the 60GHz frequency domain is an excellent candidate for meeting our customers' demanding "need for speed", and ultra-low power requirements.

To learn more about how we may address your "need for speed" and low power requirements in your wireless products, contact us now (<https://www.tensorcom.com/contact>).

Our Products

Tensorcom's TC60G1115GE and TC60G1316UE Flip-chip Modules are still the only single chip, 60GHz CMOS solutions designed to meet the ultra-low power, small form factor, and multi-Gigabit per second performance requirements of our customers' demanding "need for speed".

Our Team

Our world class team of engineers brings an impressive 20+ years of experience in designing high frequency analog RF CMOS circuits and blazingly fast digital baseband circuits for integration into single chip solutions.
